FOR IMMEDIATE RELEASE

KINETO AND BRAVOTECH DEMONSTRATE TD-SCDMA FEMTOCELL SOLUTION

Companies confirm luh interoperability; prepare for TD-SCDMA-based femtocell trials

Milpitas, Calif., June 8, 2010

Kineto Wireless, Inc., the key innovator and leading supplier of solutions that enable delivery of mobile services over broadband, and Bravo Tech Inc., a leading provider of coverage and RF solutions to the mobile industry, today announced the companies are demonstrating an end-to-end TD-SCDMA-based femtocell solution at a facility in Shanghai.

As part of the demonstration, the companies recently conducted interoperability testing between the Kineto Multi-Service Access Gateway (MSA-GW) configured as a Femtocell Gateway and Bravo Tech's TD-SCDMA femtocell based on the luh interface defined in the 3GPP Home NodeB (HNB) specification.

"Interoperability testing has progressed very smoothly," said Dong Wu, CTO with Bravo Tech. "The maturity of Kineto's luh implementation in its Multi-Service Access Gateway, along with our full-featured luh compliant femtocell, has enabled the companies to quickly demonstrate a deployment-ready solution."

TD-SCDMA is a 3GPP-standard, 3G radio link technology adopted primarily in China. In January 2009, China Mobile was awarded a 3G/TD-SCDMA license by China's Ministry of Industry and Information Technology.

Kineto's MSA-GW provides mobile service providers a range of options for improving coverage and offloading the macro network. It is uniquely designed to provide maximum flexibility and investment protection by supporting femtocells and Wi-Fi, the two key coverage and offload technologies utilized today. Kineto's MSA-GW is deployed worldwide in commercial Wi-Fi and femtocell service offers.

About Bravo Tech Inc.

Bravo Tech Inc. (BTI) is an established worldwide provider of RF and communication system products to the wireless industry. The seasoned BTI team has well over 150 years collectively of leadership experience in the wireless industry. BTI works closely with base station original equipment manufacturers and cellular network operators to provide high performance, cost competitive and highly reliable solutions. Bravo Tech has a global presence with operations in Asia and North America. Please visit us on the web at <http://www.bravotechinc.com>.

About Kineto Wireless

Kineto Wireless is the key innovator and leading supplier of standards-based solutions that enable mobile operators to embrace the cost and performance advantages of fixed and mobile broadband access networks. The company provides software and services to major wireless infrastructure and handset vendors so they can deliver Smart Offload solutions based on Wi-Fi and femtocell technologies, as well as Voice over LTE. Kineto customers and partners include Airvana, AudioCodes, BTI, Cisco, GENBAND, HTC, Juniper Networks, LG Electronics, Motorola, NEC, Qualcomm, RIM, Samsung and Ubiquisys. For more information about Kineto, please visit <http://www.kineto.com>.
