FOR IMMEDIATE RELEASE

KINETO ANNOUNCES INDUSTRY'S FIRST VOLGA ACCESS NETWORK CONTROLLER

Operators can begin trialing voice over LTE networks today

Milpitas, Calif., December 9, 2009

Kineto Wireless, Inc., the key innovator and leading supplier of solutions that enable delivery of mobile services over broadband, today announced availability of a new release of software for its access gateway solution which supports the VoLGA Forum's specification for extending voice and SMS services over LTE networks.

"Many operators are planning to begin LTE network trials in the coming months," said Ken Kolderup, vice president and general manager of Kineto's infrastructure business unit. "Our VoLGA solution enables these operators to add their existing voice and SMS services effortlessly to those trials."

Available today, Kineto's VoLGA access network controller is already installed and under test with a major mobile operator. VoLGA controllers connect to existing mobile switching centers (MSC) through standard network interfaces to enable delivery of the full range of basic telephony and intelligent network services operators expect and subscribers demand.

In related news, Kineto recently announced availability of the industry's first combined VoLGA/IMS voice client for LTE handsets. The client, which can be field upgraded, provides unmatched investment protection for operators, as well as device manufacturers developing LTE handsets.

About Kineto Wireless

Kineto Wireless is the key innovator and leading supplier of standards-based solutions that enable mobile operators to embrace the cost and performance advantages of fixed and mobile broadband access networks. Kineto provides software and services to major wireless infrastructure and device vendors to enable the development of products compliant with the leading 3GPP FMC and Voice over LTE standards. Kineto customers and partners include Cisco, GENBAND, HTC, Juniper Networks, LG Electronics, Linksys, Motorola, NEC, PicoChip, Qualcomm, Research in Motion, Samsung, and Ubiquisys.
